

Food Truck Finder

Project mission

Background

We are the Gourmet Food Association (GFA) in Gothenburg, and we want to find a way to locate the food trucks of Gothenburg. The food trucks are vehicles driving around Gothenburg, serving food to its hungry citizens. They are however very hard to find, as their location most of the time is unknown. Therefore, we think a mobile application with the purpose of locating the trucks would be very useful to us food-lovers. Also, it would be a way for the food trucks to locate its customers.

Goal

We want an application that provides a simple, user friendly way for food truck customers to find food trucks and vice versa. The application should be able to differentiate between customer and vendor.

Functionality

Customer functionality:

- Show a map with food truck locations
- See the menu of the food truck
- See a food truck daily route timetable
- Filter food trucks after your preferences

Vendor functionality:

- Only authorized vendor can use the vendor version of the app
- Update daily timetable
- Update GPS position
- Update menu

Roles

As responsible for project, our association would like you to create a requirement specification, which we will use for further development of the application.
