

Student portal

1 BACKGROUND

We are board members from the University of Chalmers. We are looking for a better way to handle the administration in the university. Currently everything is done using paper forms and this is very inconvenient for the administration office and the students. A web portal would be ideal to manage the communication between the administration office and the students.

2 GOAL

Create a web portal that can be used to replace most of the common paper form processes in order to be more time efficient.

3 FUNCTIONALITIES

- User accounts
- Registration to courses
- Registration to exams
- Schedule for students
- A database to store information about the students
- View tuition fees for different courses and programs.
- View transcript of records
- Course websites
- Degree application

4 ROLES

We are potential customers and want you to develop a system that can fulfill our requirements.
