

# MeetApp

## Background

Have you ever experienced a situation where you would like to meet a friend and the person was not sure about where the particular spot was located? Wouldn't it be amazing to visualize where two or more people should gather and make sure that all the participants get the correct information seamlessly? Its often quite time consuming and tiresome to try to explain the location of a meeting spot to a person which have no or limited knowledge of the site. We want to change that!

## Goal

To create an Android application in order to help persons to communicate and share location information for meeting sites in a more convenient and efficient way.

## Functional

- Import the contact information
- Send location invitation to multiple persons.
- Support for grouping contacts.
- Visual representation of the meeting location, user position as well as other useful information.
- Meeting participants should have some effective means of communication.

## Roles

We are a group of entrepreneurs and the project owners in a start-up company that are looking for a third party development team to create requirement specification of our vision.
