

# After-Works Gothenburg

## *Project mission*

### **Background**

We are ABOG, the Association of Bar Owners in Gothenburg. Gothenburg is a city full of leisuers, interesting venues and events. After a week of hard work, many people want to go out and socialize over a drink and a meal with friends. Finding the perfect after-work venue quickly isn't easy when there is so much to choose from. There are many previous solutions out there, but After-Works Gothenburg should focus solely on after work activities in the city of Gothenburg. We would like it to funnel potential customers toward our bars.

### **Goal**

After-Works Gothenburg is a mobile application that aims to provide a set of features that enable the user to find the perfect after work venue according to what the user wants.

### **Functionality**

The app should:

- provide a search for venues based on set criteria
  - Criteria: Age limit, average rating, cost, kind of buffet, drinks served, opening hours, seat availability, dress code, payment method
- display a detailed view of a chosen venue
- allow a user to reserve a seat on a chosen venue for 30 minutes
- have social network integration to Facebook and Twitter
- allow the user to 'check-in' to venues
- allow the user to add a venue to a list of favorites
- suggest venues to the user according to previous venues visited and favorites

### **Roles**

As product owners, we want you to do the requirements engineering for us.
