

# Gothenburg Cultural Guide

## Background

Since Gothenburg is a pretty big town, and there is always something going on it's hard to keep track of it all. It doesn't matter if you're a tourist or a local. We want an application that can keep track of all cultural events going on in the local area, whether it's sports, musics, movies, theater, opera, exhibitions and so on. Since normally you have to buy each ticket at a different place or store, it would also be very convenient to be able to buy tickets in the same application. Some places, especially events with a small crowd or target group, are hard to find and therefore a map with directions is needed.

## Goals

To enable users to find nearby events matching their selected interests and/or depending on a chosen time period. Users should be able to communicate with each other by sending invitations, chatting or joining/forming interest groups. There should be an optional possibility of integrating the application with social medias, such as facebook and twitter, and with GPS for directional purposes.

## Functionality

List local events with information for at least these categories:

Movies: Info, Price, Reviews, Ratings, Recommendations

Music: Info, Price, Reviews, ratings, recommendations

Theater: Info, Price, Reviews, ratings, recommendations

Opera: Info, Price, Reviews, ratings, recommendations

Sports: Info, Price, Statistics

You should be able to personalize listings. Choose categories etc.

You should be able to choose to get notifications about events, and when to get them.

You should be able to get directions to the events.

You should be able to show listings by date and time.

You should be able to buy tickets. If not applicable, a direction to where to buy.

You should be able to invite friends to an event, if they're using the application.

You should be able to chat and form interest groups with other application users.

Optionally, you should be able to integrate the application with social media.

You should be able to get recommendations based by your social media information if you choose to integrate it.

It should support different languages, but English and Swedish are the most important.
