

# Event It

## 1 BACKGROUND

---

Nowadays to be social is more important than ever. Even if you want to create an event for your first concert or simply want to organize a fundraiser for an important cause, this portal can help you reach all kinds of people.

## 2 GOAL

---

The goal of the portal is to allow users to create their own events with a ticket system. Users are also able to purchase those tickets.

## 3 FUNCTIONAL

---

- Users are able to create events and specify mandatory details (name, place, time, date, description, type)
- The creator can modify the event within a time limit
- The creator can set the ticket system for the event and the attributes (amount of tickets, price)
- Administrators can remove events
- Modifications of events are notified to attending users
- There is a integration between our system and social networks
- The portal includes a feedback system
- Transactions are handled by third party companies
- Tickets are delivered in an electronic format

## 4 ROLES

---

As creators of the concept of Event It we want you to develop a system which fulfills the mentioned requirements.
