

# Online Streaming of Lectures

## Background:

Most times, we would like to have a repetition of the lectures because we missed or want to go through them again. Sometimes it is hard for the students to absorb all the information at once. So an online streaming of lectures would make repetition comfortable for both the faculty and the students. In this project we will act as a product owner.

## Goal:

Create an online video streaming platform exclusive for Chalmers and GU students which can help students repeat and catch up missed lectures. This would also provide a perfect option for distance education.

## Functionality:

- Stream the lectures live.
- Be able to watch old lectures.
- Confine the lectures only to those who take the course.
- Attach relevant documents like books, research papers and slides along with the lectures.
- Evaluate the lecture.
- Give feedback of the lecture.
- Have a discussion forum.
